

Biological Control of Weeds Recovery Sheet

(Please refer to the back of this sheet for instructions)

Manaaki Whenua
Landcare Research

Site name:
Organisation:
Observer(s):

Date:
Time of day:

Current weather conditions

- 1) Sunny / Partly / Overcast / Rain
- 2) Strong wind / Light wind / Calm
- 3) Temperature (°C) < 10 / 10-15 / 15 -20/ 20 -25 / >25

Fungus information

- 4) Diseased symptoms found: Yes / No
- 5) Time spent searching (mins):
- 6) Furthest distance symptoms found from release point (m):
None Found / <20 / 20-50 / 50-100 / 100-300 / 300-500 / Further?
- 7) Overall damage to foliage: None / Occasional / Patchy / Heavy / Severe

Weed Information

- 8) Infestation: Major (as far as eye can see) / Moderate (>100m²) / Minor (<100m²)
- 9) Percentage cover at densest accessible point:
- 10) Average height of mat at densest accessible point: <20cm / 20-50cm / >50cm
- 11) Photos taken: Yes / No
- 12) Photo compass bearing:
- 13) GPS for photopoint:
- 14) Photo file name:

Comments

- 15) Have any of the following happened to the site recently?
Mowing / Spraying / Grazing / Flood / Drought / Fire / Other?
- 16) Please use the rest of the sheet to record any further observations or comments about the site.
Continue over the page if necessary.

**Tradescantia Yellow
Spot Leaf Fungus**

INSTRUCTIONS FOR FILLING OUT THIS SHEET

(Please note that it is important to complete these questions in order)

Where choices are given mark the correct answer by bolding or highlighting it or by deleting the other options.

- **Site Name** – please be consistent in the use of site names to prevent confusion.
- **Organisation** – the name of your organisation.
- **Observer(s)** – the names of people who helped with this recovery not onlookers.

Current Weather Conditions

1-3) Choose the words that best describe the weather conditions.

Insect information

- 4) Look at any time of the year for distinctive yellow spots on the upper surface of the leaves with corresponding white spots underneath, especially after wet humid weather. As the spots develop and expand they turn brown. Infected leaves die but generally remain attached to the stems.
- 5) Record how long you spent actively searching. Ideally spend 5 minutes checking the release point intensively and then look more widely around the site for another 10 minutes
- 6) If you have time to look further afield we would like to know how far away from the release point you can find adults or larvae.
- 7) Record the amount of fungal damage seen overall at the site: occasional (signs of infection present but not common), patchy (signs of infection are present but are variable throughout the site, some plants may have no signs of infection, and others may be heavily infected but this would be rare), heavy (the majority of plants are showing signs of infection and at least some plants are beginning to show signs of severe defoliation/damage or stress), and severe (severe infection and damage is obvious and widespread).

Weed Information

- 8) Estimate and record the approximate size of the infestation using the categories provided.
- 9) Estimate the percentage cover of tradescantia at the densest accessible point over an area of 5 x 5m, or if the site lend itself to a square use an equivalent sized shape.
- 10) Estimate the percentage cover of tradescantia at the densest accessible point over an area of 5 x 5m, or if the site doesn't lend itself to a square use an equivalent sized shape
- 11) Please indicate if you have taken photos.
- 12-14) If you have taken photos please record the photo compass bearing, the GPS point, the file name for the photo and attach hard copies to this form if you can.

Comments

- 15) Please indicate if any of these important events have happened to the site.
- 16) Tell us any other important information we should know about the site (e.g. whether you have been harvesting for release at new sites). Use the top of this page if you need extra space.
