# **Improving water quality – revealing the role of soil information**

**Linda Lilburne & Sam Carrick**

# Discussion Outline

## S-map Introduction

- Does soil matter?
- S-map 101
- Current S-map status & funding

## S-map: Under the hood

- Underpinning data – the NSD
- Inference engine – inbuilt models
- S-map & regional policy

## S-map in the future

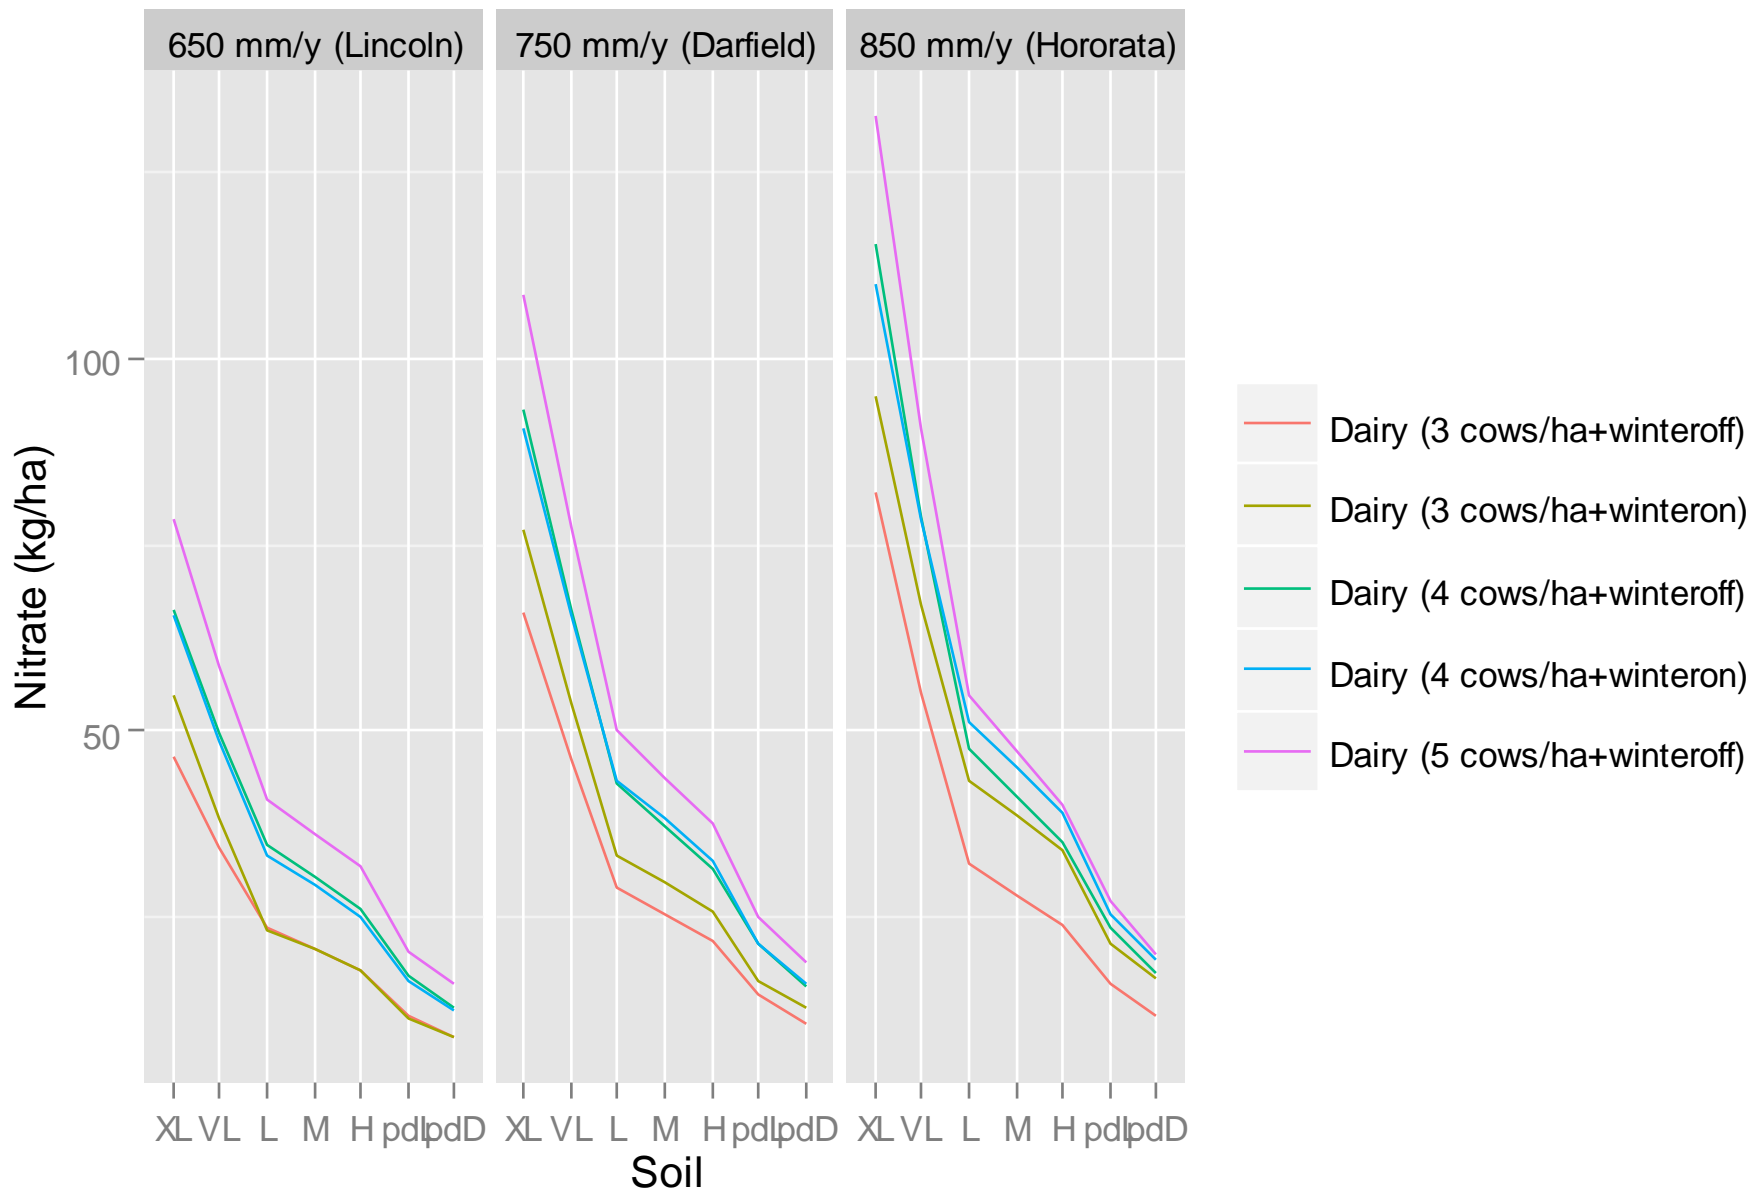

- S-map @ the farm scale
- National mapping standards / methods / protocols

# Does soil matter? N cycling

## Samples of dairy shed effluent

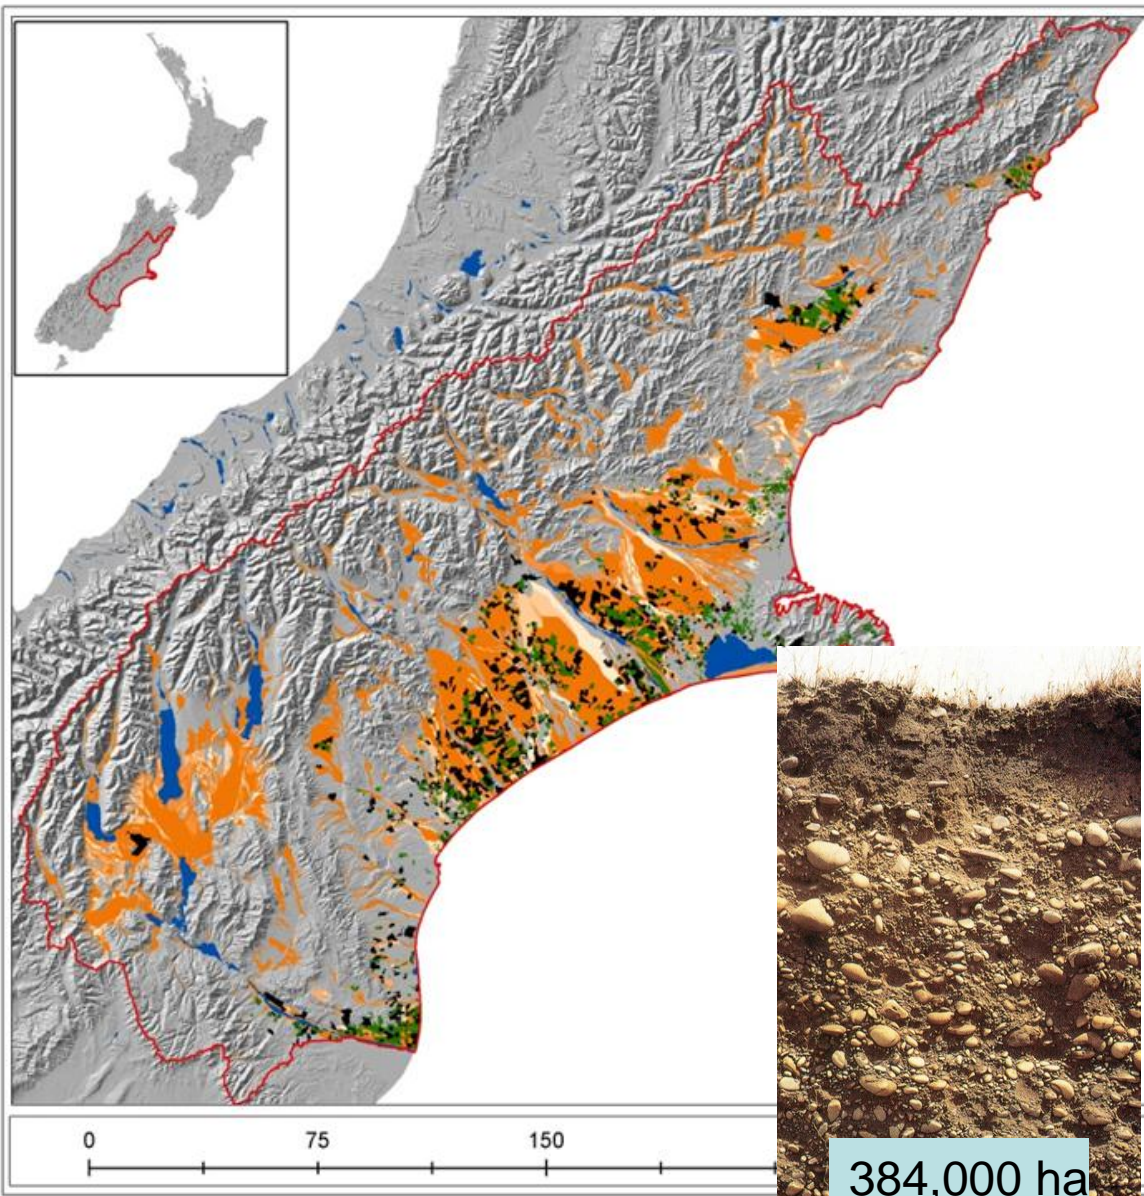

# Soil variability

Matrix

Bypass

**Dairying**

- 2000
- 2012

**Stony soils (%)**

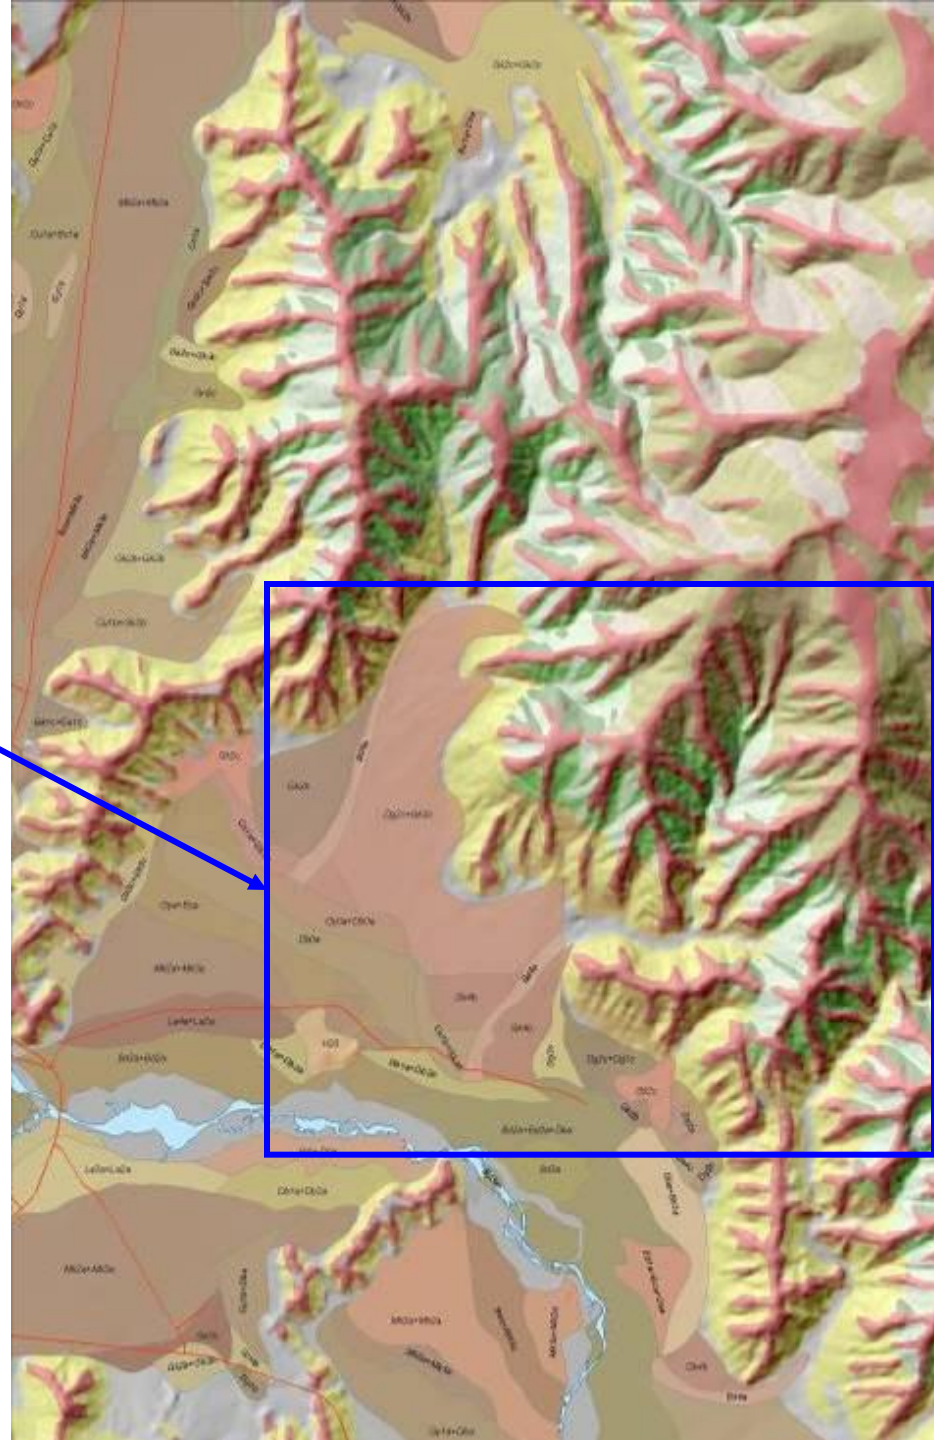

- < 20
- 20 - 40
- 40 - 60
- 60 - 80
- 80 - 100
- Canterbury
- Lakes and rivers

# S-map 101

## Prime Goals

- One complete soil map for NZ
- Upgrade good data + fill gaps
- Best available mapping/modelling techniques
- Quantitative information for every soil
- Customised outputs
- Support management at all scales

### S-map Soil Report

Report generated: 12/Dec/2011 from [www.landcare.govt.nz](http://www.landcare.govt.nz)

This information describes the typical average properties of the specified soil to a depth of 1 metre, and should not be the primary source of data when making land use decisions on individual farms and paddocks.

**Lismoref** (Public Farm District Soil) (Lismoref (30% of the report at location (517193), 1335942), Confidence: Medium)

**Key physical properties**

- Depth to soil (topsoil): 0.00 (m)
- Texture grade: Silty Loam
- Parent rock depth: Unroad
- Moisture barrier: No significant barrier within 1 m
- Topsoil structure: Slightly silty
- Topsoil bulk density: 1.15 (2.5%)
- Drainage class: Wet drained
- Aeration to root zone: Unroad
- Drainability grade: Moderate (low) (2)
- Depth to slowly permeable horizon: Moderate (low) (2)
- Permeability of slowest horizon: Moderate (low) (2)
- Profile available water:
  - (0 - 100mm soil depth): High (30%) (2)
  - (0 - 200mm soil depth): High (30%) (2)
- Dry bulk density, topsoil: 1.42 (g/cm<sup>3</sup>)
- Dry bulk density, subsoil: Not soil code within 1 m
- Depth to soil code: Not soil code within 1 m
- Depth to stony soil class: None

**Key chemical properties**

Topsoil (0-100mm): Medium (2/3)

**About this publication**

- The information described here is based on average properties of the specified soil to a depth of 1 metre.
- For further information on individual soils, please contact Landcare Research New Zealand or your nearest regional office.
- Accuracy of the information is based on the accuracy of the data used to generate the information and the accuracy of the data used to generate the information.
- The information is based on the accuracy of the data used to generate the information and the accuracy of the data used to generate the information.
- The information is based on the accuracy of the data used to generate the information and the accuracy of the data used to generate the information.

### Additional factors to consider in choice of management practice

**Water management**

- Water logging vulnerability: Very Low
- Drainage vulnerability, if not irrigated: Moderate
- Response time: Medium
- Hydrological soil group: A
- Infiltrability: Fair to very good, probably best with good drainage management and soil with moderate FAO

**Conservation management**

- Soil erosion vulnerability: High
- Planting vulnerability: Poor to moderate
- Response time: Medium
- Dry effluent (PDE) risk category: D

**Additional information**

- Soil classification: Public Farm District Soils
- Landcover: 1
- Native vegetation: Site
- Soil profile number: From High Sandstone Rock
- Soil depth of disturbance: From High Sandstone Rock
- Rock ranges of this soil: From High Sandstone Rock
- Parent material code: Alluvium

**Characteristics of functional horizons in order from top to base of profile**

Horizon	Thickness	Stones	C <sub>org</sub>	Soil
L1 (0-10)	0-10	0-10%	10-20%	2-30%
L2 (10-20)	0-10	0-10%	10-20%	2-30%
L3 (20-30)	0-10	0-10%	10-20%	2-30%
L4 (30-40)	0-10	0-10%	10-20%	2-30%
L5 (40-50)	0-10	0-10%	10-20%	2-30%
L6 (50-60)	0-10	0-10%	10-20%	2-30%
L7 (60-70)	0-10	0-10%	10-20%	2-30%
L8 (70-80)	0-10	0-10%	10-20%	2-30%
L9 (80-90)	0-10	0-10%	10-20%	2-30%
L10 (90-100)	0-10	0-10%	10-20%	2-30%

\* Only dry and sand percent values are for the relevant flow (soil water, SA = 100%)

### Soil Information for Lismoref

The following information can be entered in Current National Register under #1. This information is derived from the S-map soil properties which are maintained in the most appropriate Current Register for Soil Ability Lismoref\_1

**Soil description page**

Click the "Select soil" option. From the "Drop down" box select: Show

**Soil profile page**

Top soil (0-10 cm): The soil below: Silty loam

Is stony: False

Is impacted (this depends on management so cannot be obtained from S-map)

**Lower profile**

Soil texture group: Medium

Non-saturated zone depth in brackets: (Dry matter 0.4 - 0.6)

**Development page**

Profile average class in natural state: Well drained

### S-Map soil summary table

NZTM coordinates: 1523164, 5176881

Soil name (factsheet)	%	Key soil properties	Confidence
Mayfield (Sib 2)	60	moderately deep, mode...	<a href="#">Medium</a>
Darnleyf (Sib 1)	40	shallow, moderately w...	<a href="#">Medium</a>

Click on a soil name above to get a PDF factsheet.

<http://smap.landcareresearch.co.nz/home>

# Current demand for soil information

# Present coverage of S-map

Total coverage = 21%

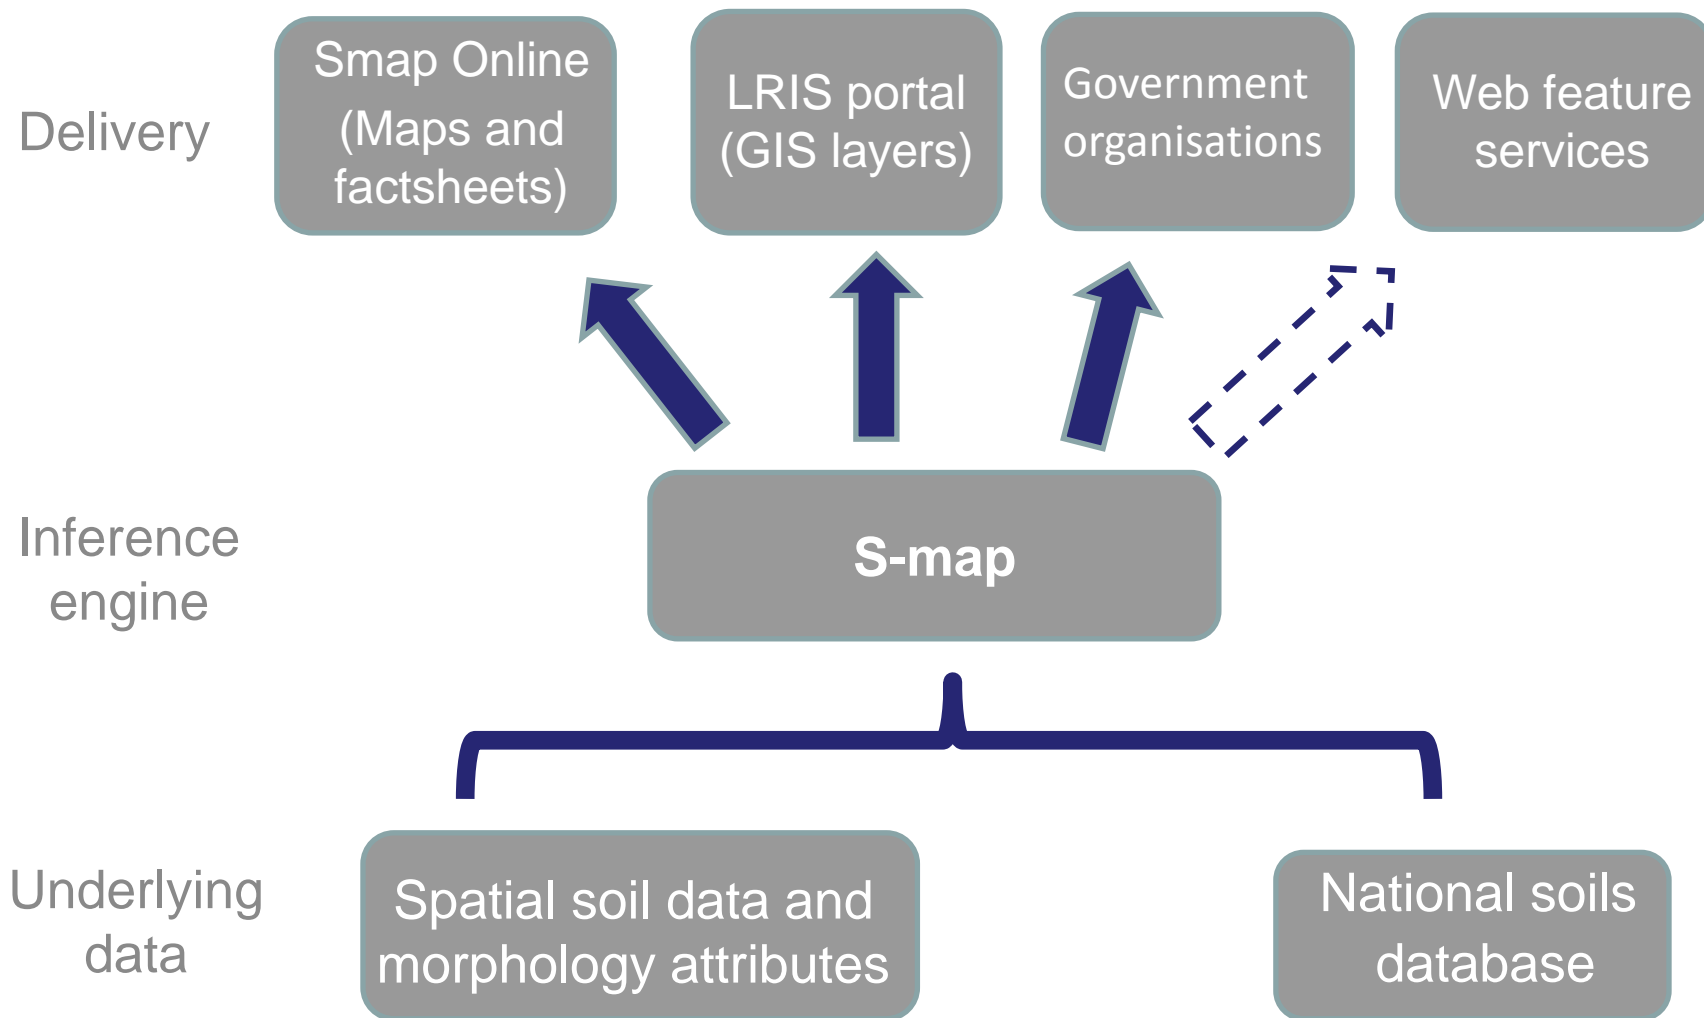

Land class	% NZ	% class covered
Multiple use	26%	37%
Pasture / Forestry	33%	20%
Conservation	39%	7%

# Key messages (S-map)

- S-map is delivering .... but need to extend the coverage
- Regional councils are key funders (so far) – hence the focus on their needs.
- As we will show, the power and flexibility of S-map means that it has great potential at multiple scales for multiple stakeholders

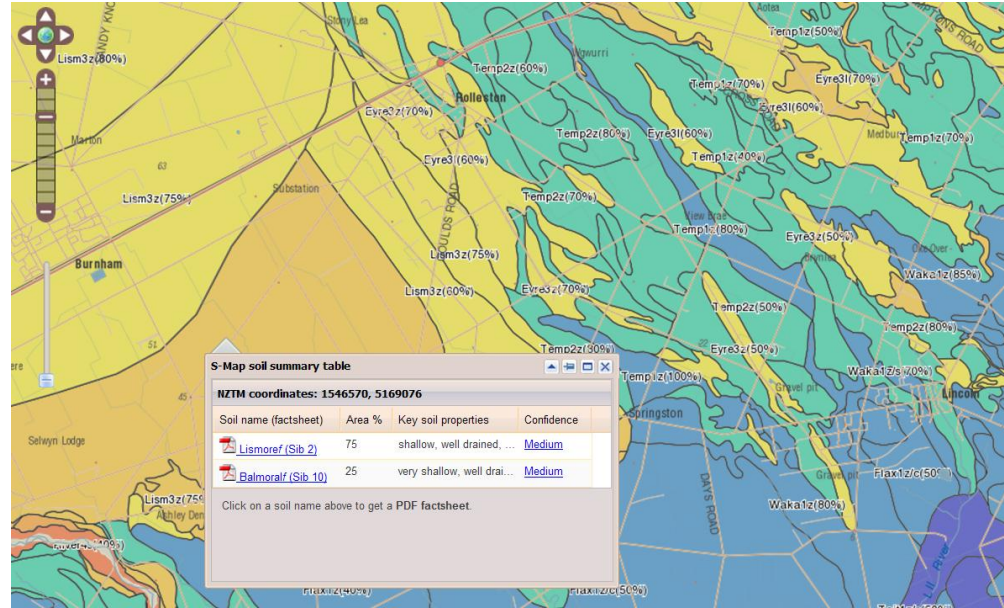

## 2. S-map : under the hood

# S-map vs National Soils Database

NSD = point  
measurements of soil  
attributes

# National Soils Database

- Archival database from the Soil Bureau
- Nationally significant database
- ~1500 profiles with analytical data
  - Sounds a lot.....BUT,
- Many profiles only limited analyses
  - Only 416 sites with soil water data

# NSD redevelopment Yr1

Focus: Rebuilding the database infrastructure to meet modern needs

~~Archival~~

Alive !!!!

Capability: Database not just limited to classic pedology data

# Soil data generation in NZ

Public funding generates vast amount of soil data per annum

Example 1:

Some numbers from one CRI lab:

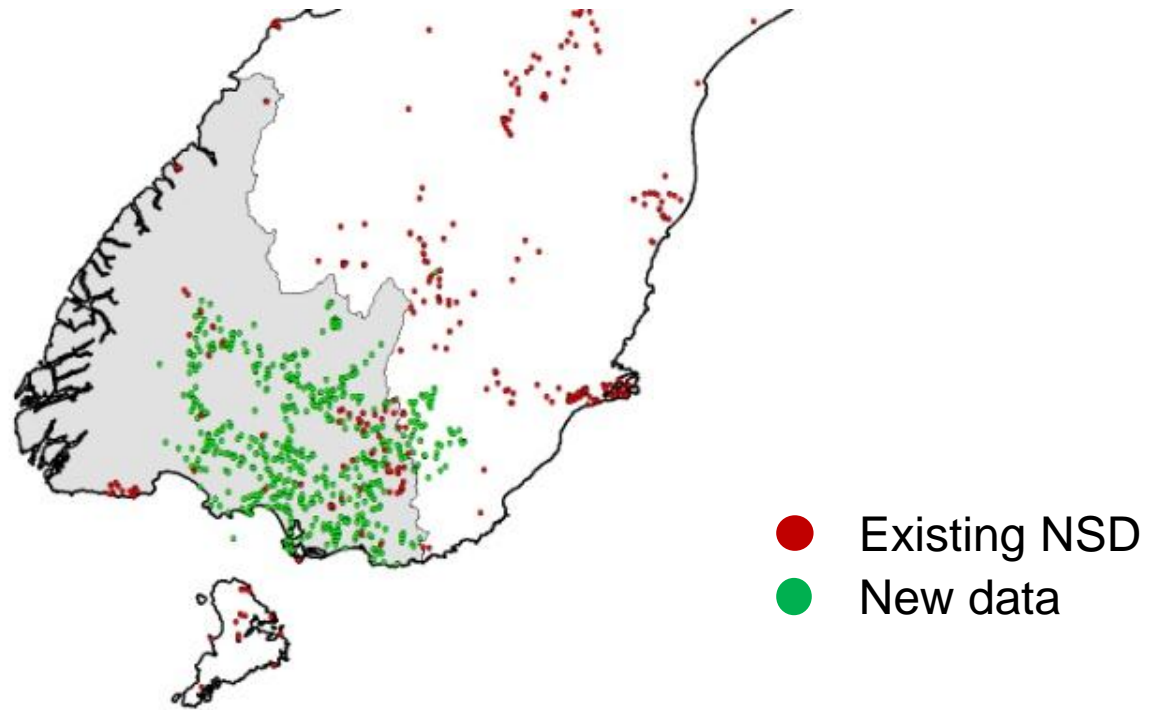

2,724	14,680	65 : 35
samples	attributes	source

Imagine the per annum data generation by the major soil research agencies:

3 CRI's, 3 Universities, 11 regional councils ....

# Soil data generation in NZ

## Example 2: Southland

# Soil data generation in NZ

## Example 3: Waikato

Agriculture, Ecosystems and Environment 185 (2014) 34–40

Contents lists available at ScienceDirect

Agriculture, Ecosystems and Environment

journal homepage: [www.elsevier.com/locate/agee](http://www.elsevier.com/locate/agee)

Soil C and N contents in a paired survey of dairy and dry stock pastures in New Zealand

A.L. Barnett<sup>a,b</sup>, L.A. Schipper<sup>a,\*</sup>, A. Taylor<sup>b</sup>, M.R. Balks<sup>a</sup>, P.L. Mudge<sup>c</sup>

Data generated : 25 paired sites (50)  
C, N, Bulk density  
3 depths each site } 450 attribute measurements !!!

# Key messages (NSD)

- NZ generates huge amount of soil data annually
- ... poor data management means minimal benefit for that investment
- Landcare is building this essential database
- **But** ... we need your support.

# Inference Engine (models)

S-map &  
NSD

Soil properties  
Soil-based risk/vulnerability  
Soil ecosystem services

S-map/NSD +

## Soil information for Overseer<sup>™</sup>

The following information can be entered in Overseer Nutrient Budget model v6.1. This information is derived from the S-map soil properties which are matched to the most appropriate Overseer categories for S-map sibling: Lismore\_1.1

### Soil description page

Click the 'Select soil by order' option. From the 'Order' dropdown box select: Brown

### Soil profile page

Top soil (0 - 10 cm)

Top soil texture: Silt loam

Is stony: False

Is compacted (this depends on management so cannot be obtained from S-map)

Lower profile

Soil texture group: Medium

Non-standard layer (depth in brackets): Stony matrix (0.4 - 0.6m)

### Drainage/runoff page

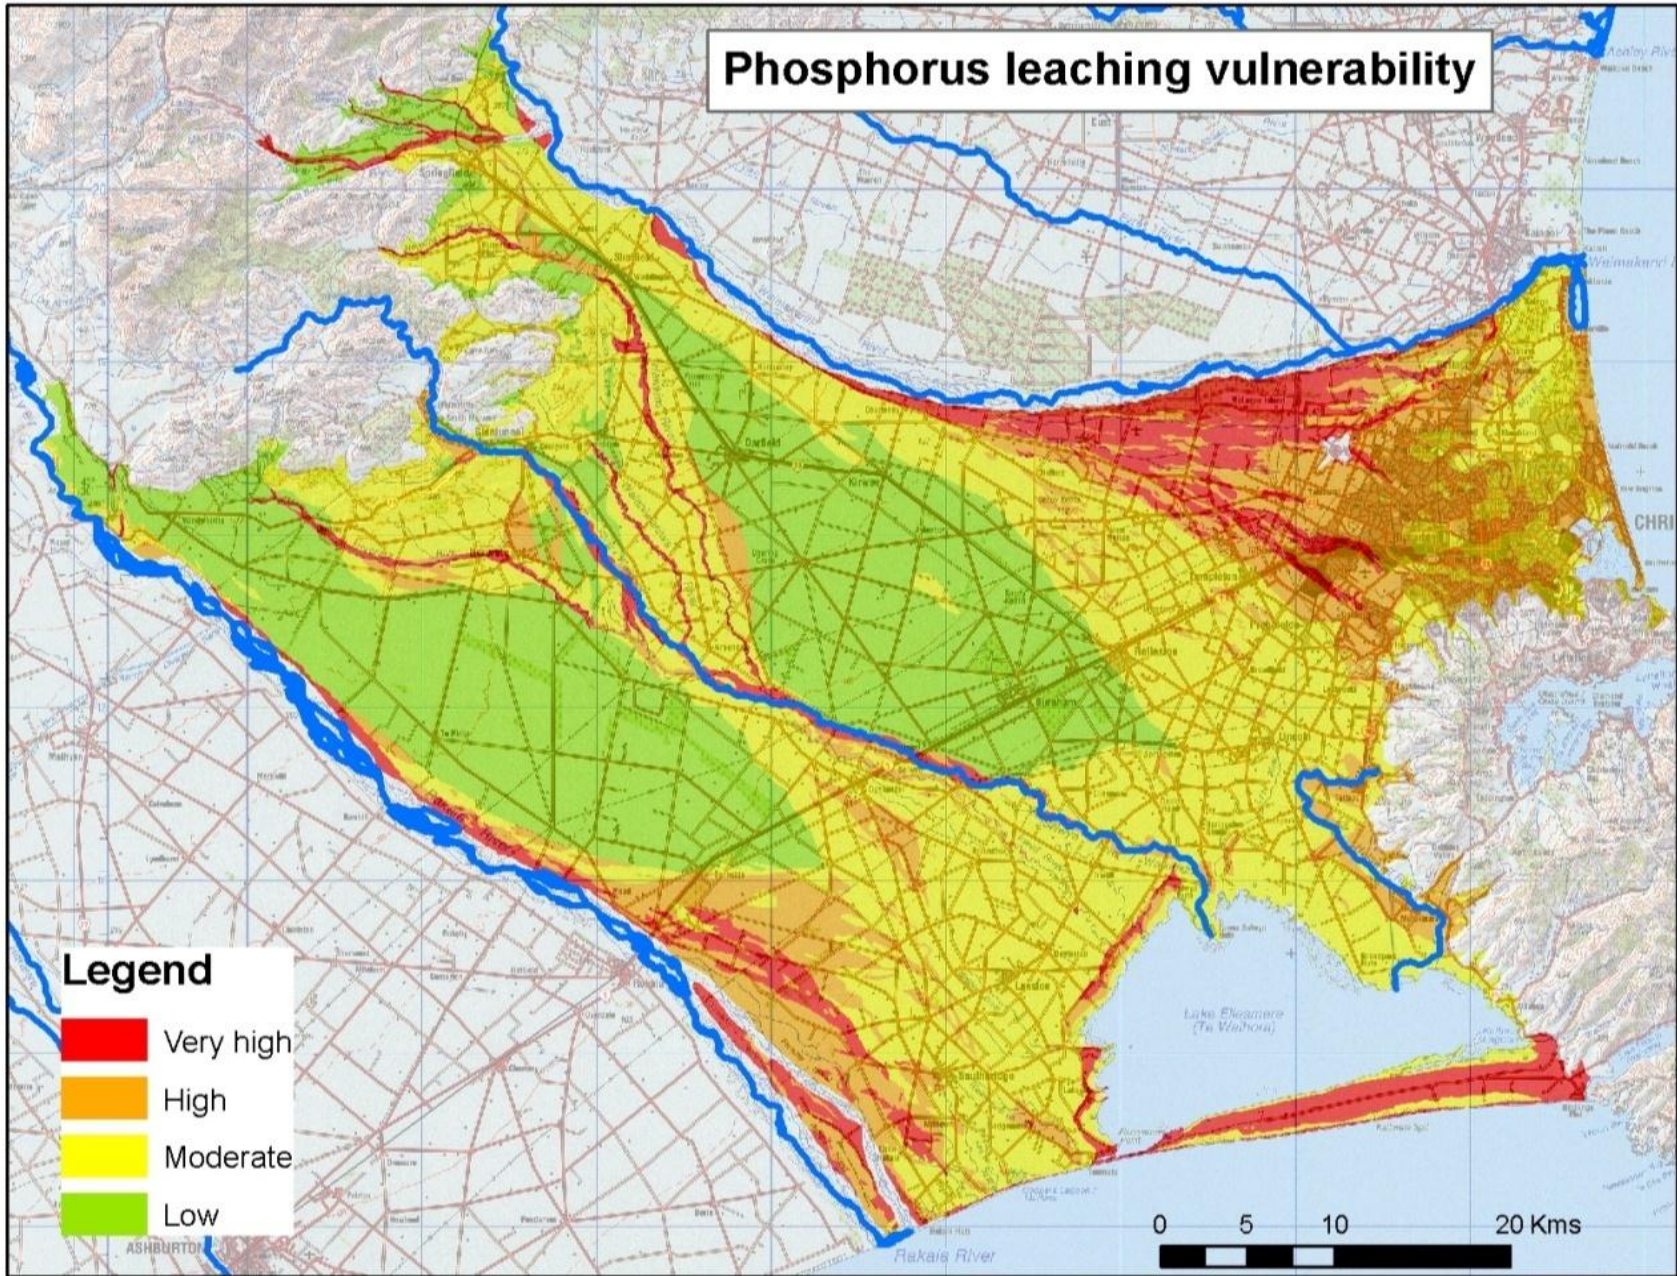

Profile drainage class (in natural state): Well drained

# Soil vulnerability mapping

## Soil factors affecting

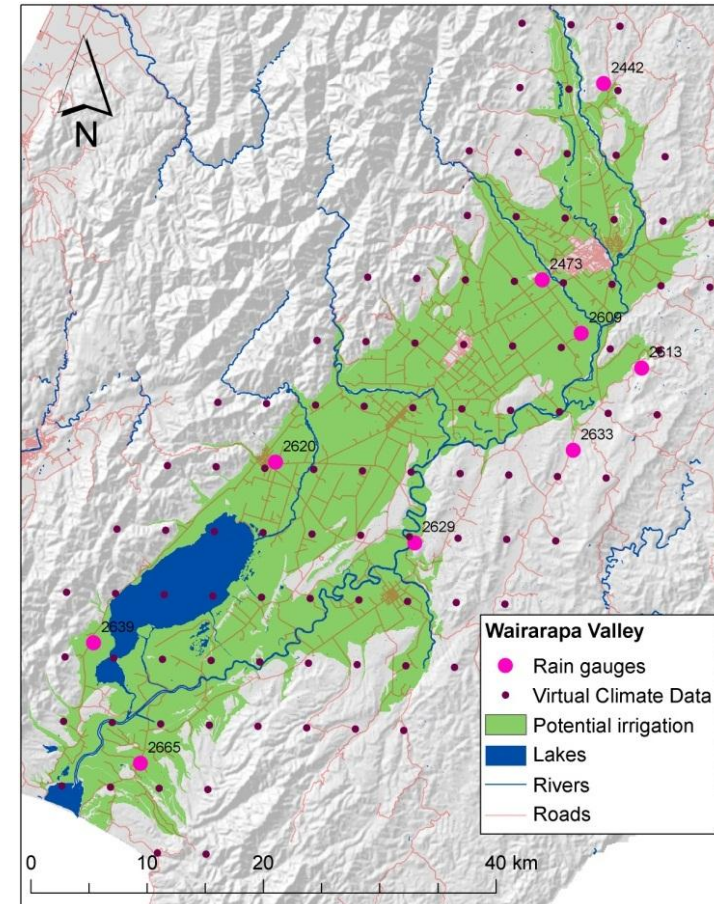

- Leaching (N and P)
- By pass flow
- Potential Runoff

# Phosphorus leaching vulnerability

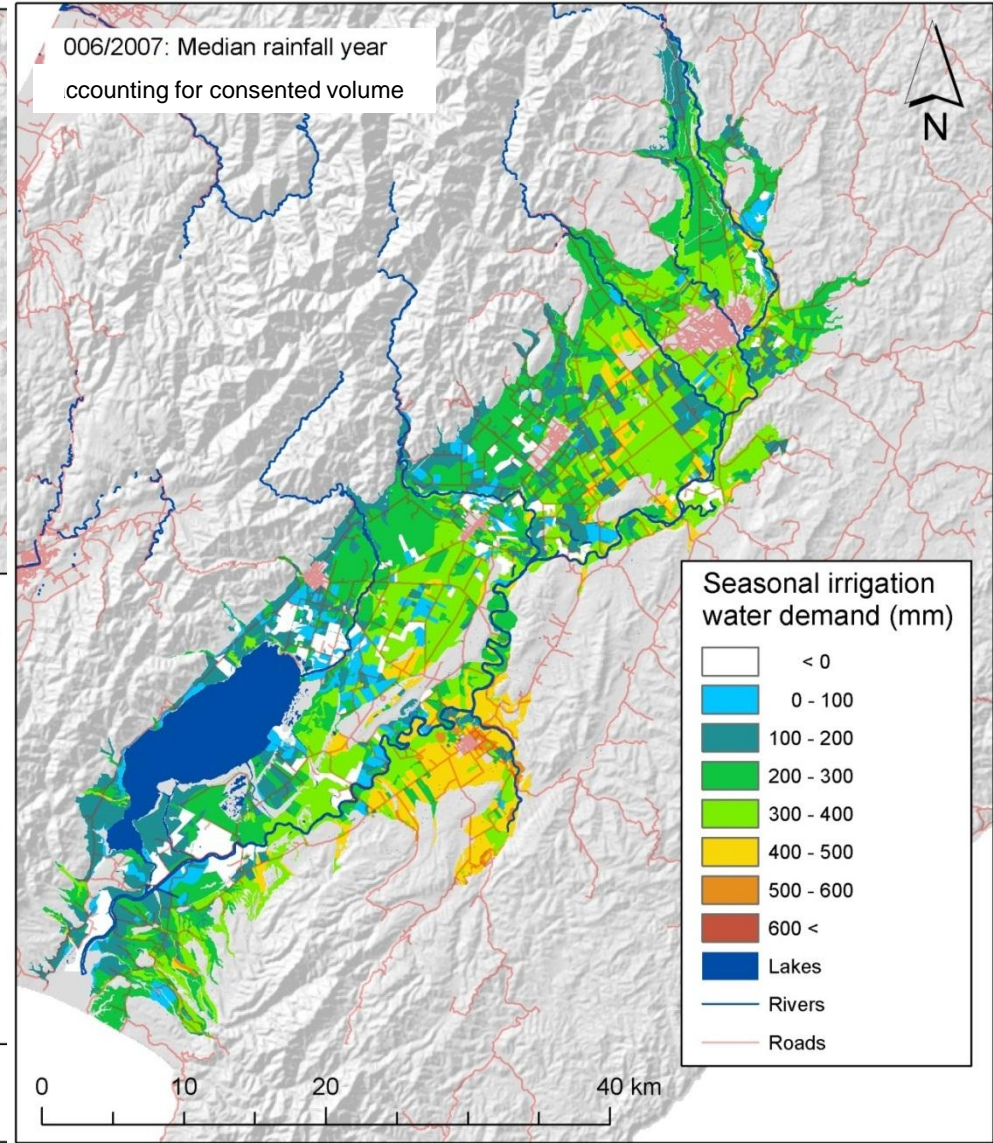

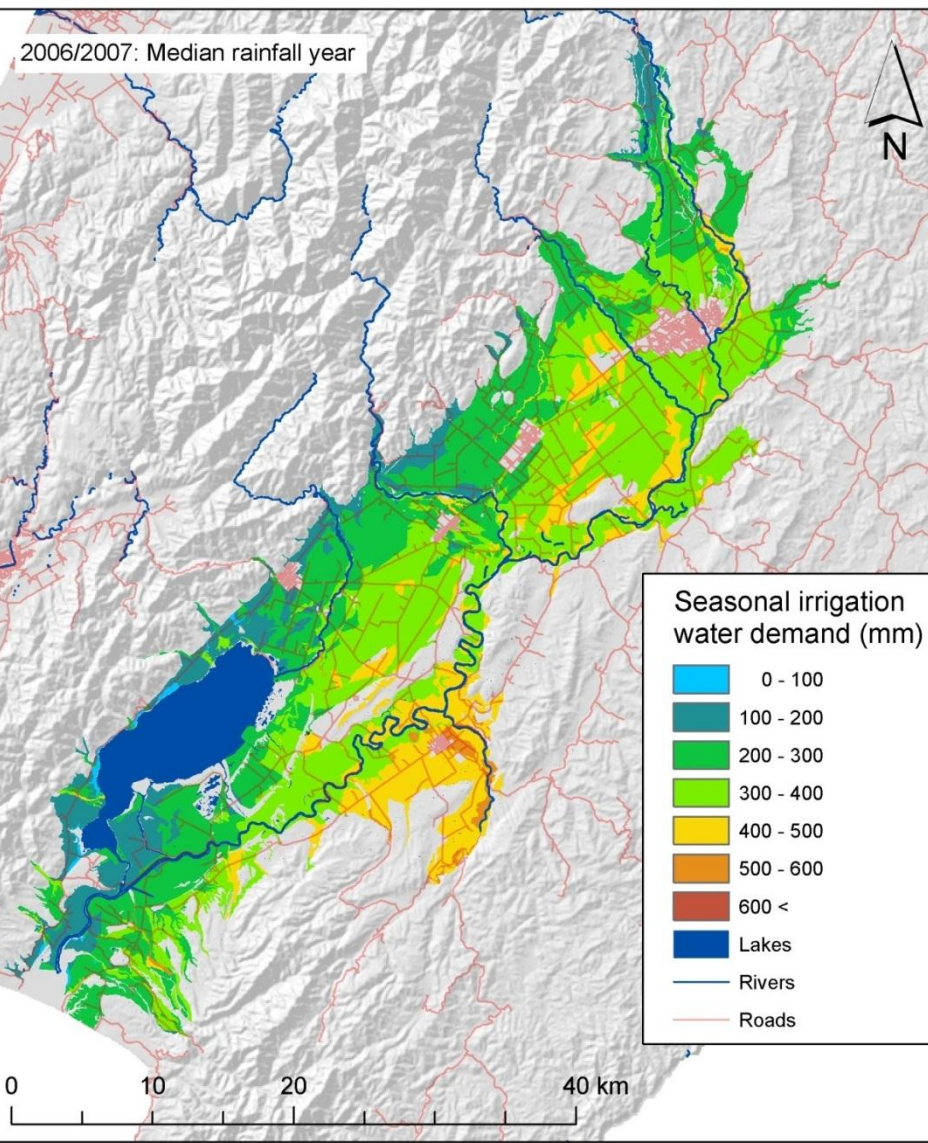

# Soil + climate (water demand)

- Run a daily water balance using Niwa Virtual Climate Stations
- Irrigate when at 50% PAW
- Takes into account the storage capacity of the soil and capillary flow from groundwater

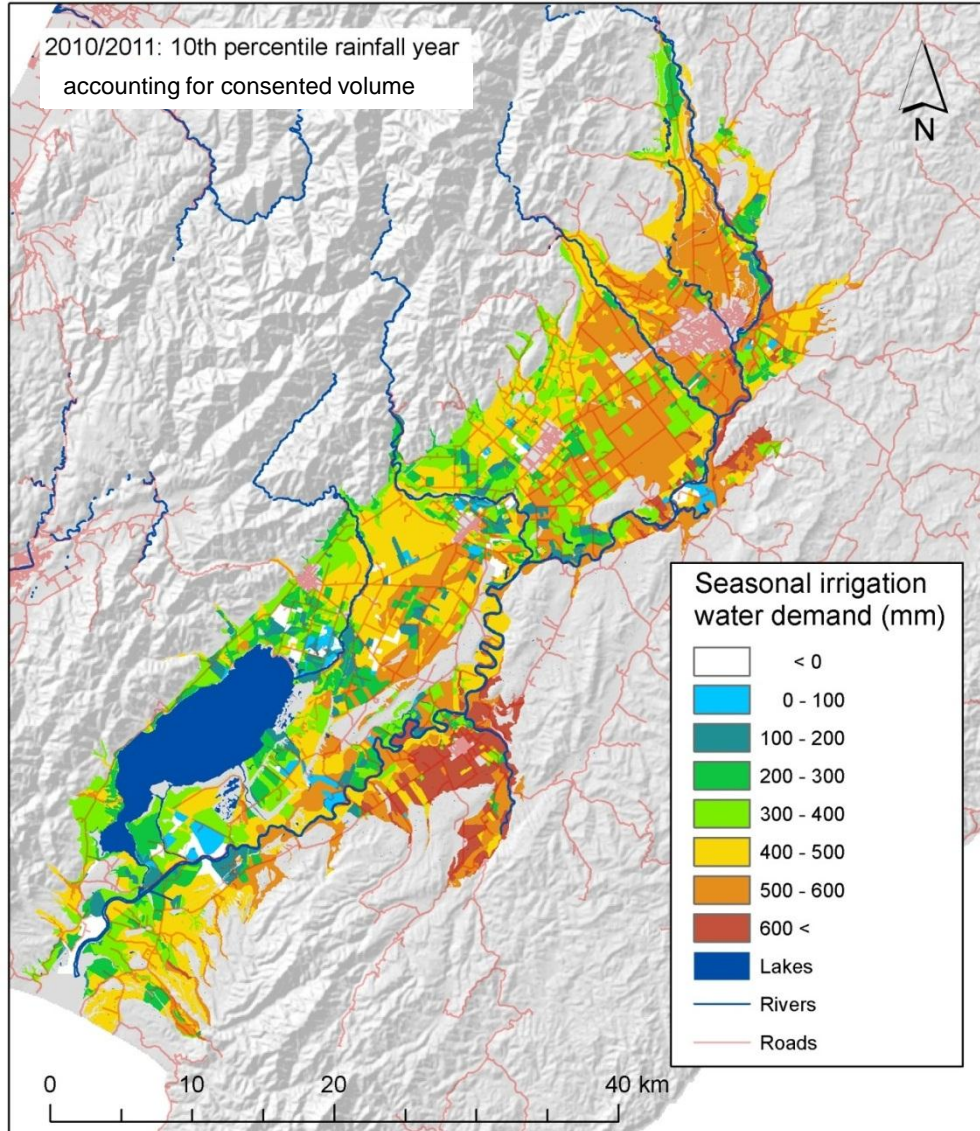

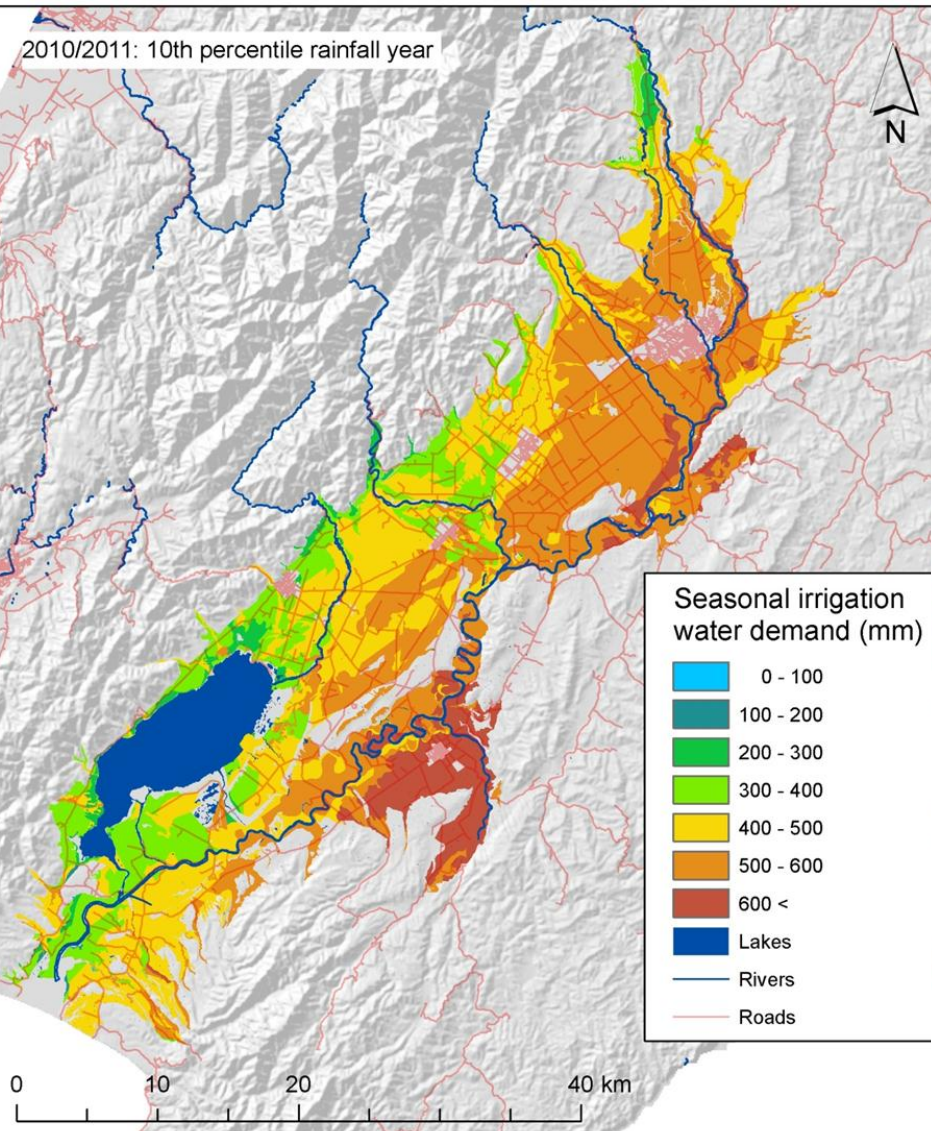

# Water demand across irrigation season for median rainfall year

# Water demand across irrigation season for 10<sup>th</sup> percentile rainfall year

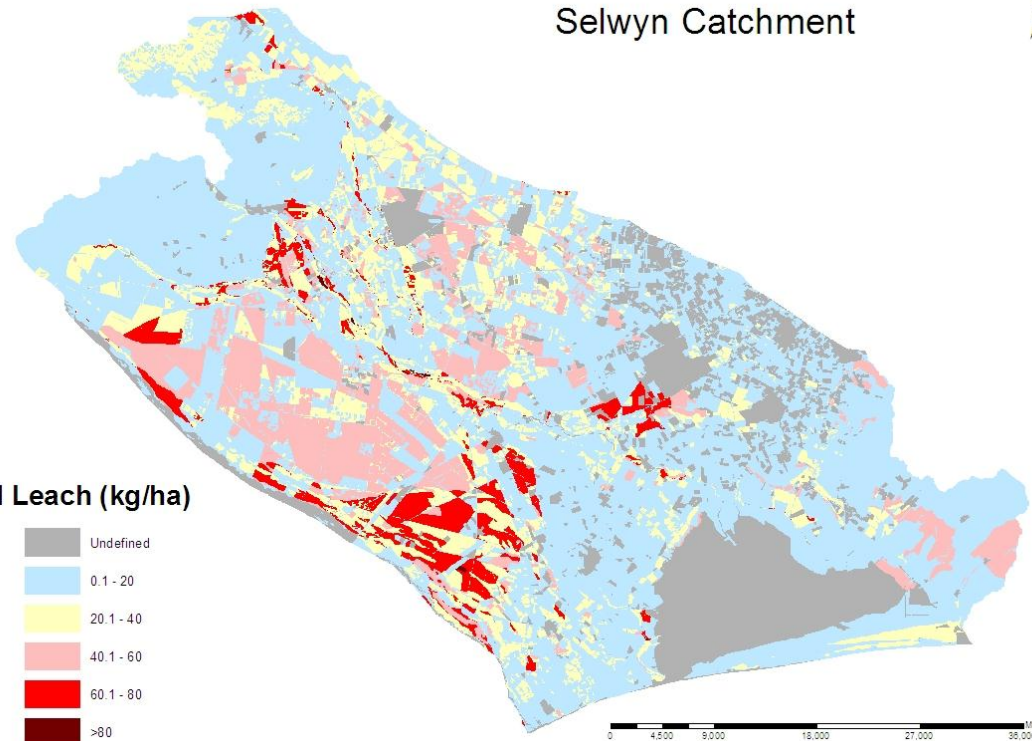

# Soil + climate + land management

- Land management = Pressure (past, current or potential)
- Model agricultural impact: climate, soil, and farm type & management, irrigation vs dryland on
  - nutrient losses
  - contaminants
  - soil health
  - N saturation

# Catchment loads (nitrate)

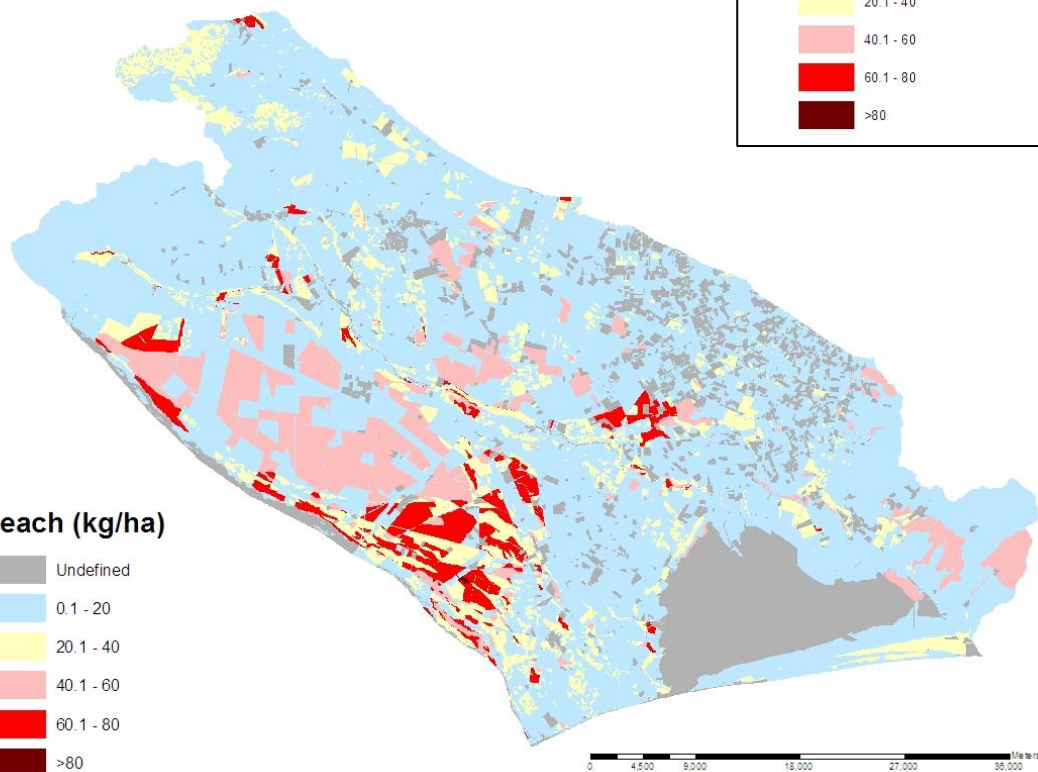

Selwyn Catchment

N Leach (kg/ha)

Baseline scenario

“Good information is necessary if the right decisions are to be made on freshwater quality management, whether by central government, councils or resource users”

Freshwater Reform 2013

# Key messages (Under the hood)

- The S-map/NSD linkage demonstrates the potential benefit of coordinated soil data management
- With informatics technology we now have a powerful and flexible soil information system
- Can't achieve regional water quality outcomes without good soil information

# 3. Smap in the future

## REGIONAL COUNCIL REQUIREMENTS Expected in next few years

Figure 2: Likely Regional Council Requirements for Farm Environment Plans or Nutrient Management Plans in next few years

Policy & regulation drivers = game changer

Success will need quality soil information

Information provision needs to have:

- Clarity (appropriate methods and options for farm scale mapping)
- Certainty (in the accuracy, reliability and acceptability of the data) to those investing
- Auditable (equitable and consistent outcomes)
- Consistency (to allow integration across scales, farm data to catchment-level modelling)

# Sources of soil information

- LUC/LRI maps
- Electro-magnetic induction survey
- Field observations (e.g., morphology)
- Lab analysed physical samples (biological, chemical and physical properties)
- Continual measurements (lysimeters, soil moisture meters)
- Soil survey
- Digital soil modelling
- Precision agriculture records

# Features of a protocol

- Simple organisation (hierarchy)
- Underpinned by referenced standards
- Produce consistent, auditable outcomes

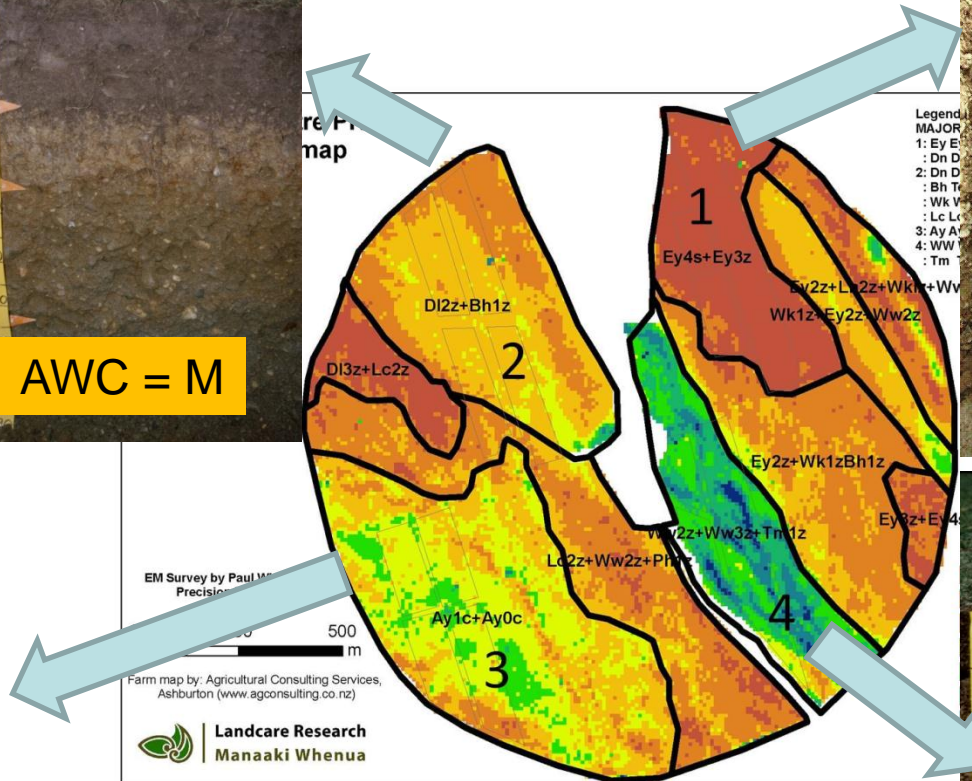

But...

- Different in key land environments  
(e.g. multiple use, semi-intensive rolling / hill, steeplands)
- Flexible to accommodate new issues, science and technology

# An example protocol: intensively farmed plains

Level	Soil map	Base soil attribute data	Temporally dynamic attributes	Indicative cost (e.g. 200 ha farm)
Poor	Fundamental soil layer	Fundamental soil layer	-----	Free
Basic	S-map online	S-map fact sheets	On-farm observations + model defaults	Free
Good	Low variability: S-map High variability: Farm mapping	S-map fact sheets	On-farm observations	\$1000 - \$10,000
Premium	Farm / paddock mapping	S-map fact sheets upgraded with on-farm data		\$10,000+

# The great farm scale challenge !!

# Factsheets to support farm plans

## S-map Soil Report

Report generated: 12-Dec-2013 from <http://smap.landcareresearch.co.nz>

This information sheet describes the typical average properties of the specified soil to a depth of 1 metre, and should not be the primary source of data when making land use decisions on individual farms and paddocks.

### Lismoref

S-map ref: Lismore\_1.1

### Pallic Firm Brown Soil

Lism3z (80% of the mapunit at location (5171933, 1539342), Confidence: Medium)

#### Key physical properties

Depth class (digability)	Shallow (20 - 45 cm)
Texture profile	Silty Loam
Potential rooting depth	Unlimited
Rooting barrier	No significant barrier within 1 m
Topsoil stoniness	Slightly stony
Topsoil clay range	15 - 25 %
Drainage class	Well drained
Aeration in root zone	Unlimited
Permeability profile	Moderate Over Rapid
Depth to slowly permeable horizon	No slowly permeable horizon
Permeability of slowest horizon	Moderate (4 - 72 mm/h)
Profile available water	Moderate (100 mm)
	(0 - 100cm or root barrier)
	Moderate (88 mm)
	(0 - 60cm or root barrier)
	High (60 mm)
	(0 - 30cm or root barrier)
Dry bulk density, topsoil	1.09 (g/cm <sup>3</sup> )
Dry bulk density, subsoil	1.42 (g/cm <sup>3</sup> )
Depth to hard rock	No hard rock within 1 m
Depth to soft rock	No soft rock within 1 m
Depth to stony layer class	Shallow

Irrigation

#### Key chemical properties

Topsoil P retention	Medium (43%)
---------------------	--------------

#### About this publication

- This information sheet describes the typical average properties of the specified soil to a depth of 1 metre.
- For further information on individual soils, contact Landcare Research New Zealand Ltd: [www.landcareresearch.co.nz](http://www.landcareresearch.co.nz)
- Advice should be sought from soil and land use experts before making decisions on individual farms and paddocks.
- The information has been derived from numerous sources. It may not be complete, correct or up to date.
- This information sheet is licensed by Landcare Research on an "as is" and "as available" basis and without any warranty of any kind, either express or implied.
- Landcare Research shall not be liable on any legal basis (including without limitation negligence) and expressly excludes all liability for loss or damage howsoever and whenever caused to a user of this factsheet.

Identifying where good management practices are needed

### Lismoref

#### Additional facts

Vulnerability classes relate to soil properties only and do not take into account climate or management

#### Soil structure integrity

Erodibility of soil material	Moderate
Structural vulnerability	Moderate (0.52)
Pugging vulnerability	not available yet

#### Water management

Water logging vulnerability	Very Low
Drought vulnerability - if not irrigated	Moderate
Bypass flow	Medium
Hydrological soil group	A
Irrigability	Flat to very gently undulating land with good drainage/permeability and soils with moderate PAW

#### Contaminant management

Bypass flow	Medium
Dairy effluent (FDE) risk category	D

Farm dairy effluent framework

#### Additional information

Soil classification	Pallic Firm Brown Soils
Family	Lismoref
Sibling number	1
Profile texture group	Silty
Soil profile material	Rounded stony soil
Rock class of stones/rocks	From Hard Sandstone Rock
Rock origin of fine earth	From Hard Sandstone Rock
Parent material origin	Alluvium

#### Characteristics of functional horizons in order from top to base of profile:

Functional Horizon	Thickness	Stones	Clay*	Sand*
Loamy Weak	15 - 30 cm	0 - 10 %	15 - 25 %	5 - 30 %
Loamy Weak	5 - 25 cm	0 - 10 %	12 - 25 %	5 - 30 %
Very Stony Loamy Compact	0 - 20 cm	35 - 60 %	10 - 22 %	10 - 50 %
Very Stony Loamy Loose	0 - 20 cm	50 - 70 %	6 - 12 %	20 - 70 %
Very Stony Sandy Loose	40 - 55 cm	60 - 75 %	1 - 4 %	85 - 95 %

\* clay and sand percent values are for the mineral fines (excludes stones). Silt = 100 - (clay + sand)

# We recommend ...

- Pan agency national farm-scale soil information protocol working group
- Consistent NZ wide training
- Simple farm mapping support tools, e.g.
  - soil mapping & description guide,
  - online soil factsheet builder

# Key messages (S-map in the future)

- We are now focussing on supporting farm scale soil information
- Key to this is a national soil information protocol
- Big challenge is closing the loop between consistency in farm plans and catchment outcomes
